The Urban Assembly School for the Urban Environment proposed a sustainability project that was entered into Lutron Electronics' Bright Green Dream School Sustainability Challenge: <http://www.mygrantwrangler.com/profiles/blogs/lutron-electronics-2009-bright>

The school was named a finalist and garnered the school a classroom energy efficient lighting upgrade from Lutron Electronics. Their proposal focused on an efficient way to enhance one of their science rooms. They incorporated a cross-curricular plan to use the outcomes and data from these upgrades for projects in nearly every subject.

The Urban Assembly for the Urban Environment was presented with a check in the amount of \$3,500 symbolizing the finalist prize.

Lutron created the challenge to draw K-12 students and teachers into the practice of learning and teaching about sustainable living. The company took energy efficient lighting in schools to the next level when it created the Greenovation program which includes a lighting control solution that incorporates exclusive "Lighting and Learning" science curriculum tools to help teach students science concepts. The Challenge continued this sustainable learning trend by asking students and teachers to propose sustainability projects that can be used to teach, while saving valuable resources.
